CYBERSECURITY-as-a-SERVICE (CaaS)

Get peace of mind knowing that your networks, medical devices, and patients are protected 24x7

Software is not enough.

You shouldn't have to sacrifice safety and security when setting your cybersecurity strategy because of a lack of resources, budget, or expertise. Most people think they are safe from cyberattacks if they have network monitoring software, but software alone is not a cybersecurity strategy.

Comply, Detect, Respond.

To stop today's modern attackers, you need experienced cybersecurity expertise with 24x7 eyes-on-glass monitoring of networks and all connected devices (including your medical and IoT devices), robust processes and procedures, protocol-driven incident response, and tactical forensics.

> " *According to Gartner, organizations purchase an average of 16 cybersecurity solutions, yet only 23% of them are fully deployed. IBM cited this lack of deployment as a security risk. Taking a holistic approach is the answer.* "

Let CaaS take care of you.

Sensato's Cybersecurity-as-a-Service (CaaS) program is a cost-effective, holistic cybersecurity solution for healthcare organizations of any size. CaaS allows healthcare organizations to consolidate their cybersecurity stack to comply with cybersecurity best practices and regulations, detect a threat or attack, and quickly respond to an incident to protect your organization from threats and keep patients safe.

Let Caas help you...

- Reduce the workload of your teams with a fully managed solution
- Comply with regulations and best practices by taking care of HIPAA and NIST assessments
- Detect threats and attacks quickly by alerting our team to any incidents
- Respond to an attack within the 14-minute critical success target window

Cybersecurity-as-a-Service

Affordable, holistic, managed cybersecurity to take the burden of cybersecurity off your teams.

Sensato's Cybersecurity-as-a-Service program helps evolve your ability to comply with best practices and regulations, detect threats and respond effectively to an attack. With an emphasis on protecting the patient, not just protecting patient data, Sensato CaaS is a one-of-a-kind program that helps you reduce liability and increase defensibility.

Consolidate your cybersecurity stack to comply with regulations and best practices, detect threats, and quickly respond to an incident to protect your organization from threats to keep your patients safe.

Reduce the Workload of Your Team with a Fully-Managed Solution

- Security and monitoring of all servers, networks, and medical devices
- Detect threats with deception technologySupport for tactical incident response
- Access to a library of Cybersecurity policy and procedure templates

Detect Threats and Attacks Quickly

- Real-time packet inspection and deception technologies to quickly detect an attacker in your network
- Cybersecurity Tactical Operations Center (CTOC) monitors your networks and devices 24x7
- Monitoring of your medical devices
- Automated countermeasure capabilities provided to aid in remediation

Comply with Regulations and Best Practices

- Assess your cybersecurity maturity to understand gaps and define an aligned cybersecurity strategy quickly
- Comply with HIPAA, NIST CSF, and PCI
- Manage risks and policy exceptions
- Quarterly review of your security posture and progress towards cybersecurity goals
- Get boardroom to basement alignment quickly using a dashboard to identify gaps

Respond to an attack within the 14-minute Critical Success Target

- A modern approach to incident response using protocols and automated countermeasures
- Specialized medical device protocols that put the patient first and support for clinical engineering and rapid response teams
- Increase your defensibility by having the right processes and procedures in place
- Decrease your liability by documenting that you've addressed every risk

Cybersecurity Advisory Services

A suite of training and simulations that elevate your cybersecurity program to the next level.

Incident Response Training – develop the skills required to effectively respond to any cyberattack using protocols and immediate action drills

Penetration Testing – A modern testing approach to identify vulnerabilities in your network

Tabletop Simulation – Stages a realistic cyberattack including real-life scenarios based on the latest cyber intelligence to uncover areas for improvement at your organization

Sensato is an Information Sharing & Analysis Organization (ISAO) working with government agencies (like CISA, DHS, FDA) to share threat intelligence, evaluate threats, and provide recommendations for action. We have a Memorandum of Understanding (MOU) with the FDA. This means that as a Sensato client, you have access to these organizations and threat intelligence.
